

STORAGECRAFT™ SHADOWPROTECT 4™ IMAGEMANAGER ENTERPRISE

Innovative disaster recovery, backup consolidation, off-site replication and simplified management

Maximize Business Continuity and
Protect Your Critical Data with
ShadowProtect ImageManager Enterprise

Backup and disaster recovery (DR) is difficult to manage, leaving many IT organizations to question whether their DR plan will work when disaster strikes. ShadowProtect ImageManager Enterprise™ provides new and innovative tools to deliver rapid disaster recovery, off-site replication, confirmation of backup integrity and simplified management of your backup image files.

ShadowProtect ImageManager Enterprise includes HeadStart Restore™ (HSR), allowing you to automate recovery and minimize downtime. With HSR, IT administrators create a system restore job that begins the recovery process right away – before it's needed. The restore job is updated with incremental changes throughout the day. In the event of a disaster, you finalize your restore, prepare your virtual environment, run ShadowProtect's Hardware Independent

Restore™ technology, reboot your server and your recovery is complete in a few minutes, rather than hours or even days – even with terabytes of data on your server. The recovery window is eliminated because recovery has already started – and is ongoing as server backups continue.

ShadowProtect ImageManager Enterprise allows you to automatically consolidate point-in-time backup image files on a daily, weekly and monthly basis for simplified management. This also allows you to reduce the amount of disk space required for backups. Automatic backup image verification and re-verification included in ShadowProtect ImageManager Enterprise ensures every backup is in a good state, should it be needed for system recovery.

For an additional level of protection, automatically send your backup images to a separate destination, locally or off-site, with the replication feature in ShadowProtect ImageManager Enterprise. In the event of a catastrophe, you're able to get your systems online. This feature also allows you to save backups to an off-site location for compliancy and archival requirements.

ShadowProtect ImageManager Enterprise also provides notification tools so you always know the status of your backup jobs and backup images. Set e-mail configurations to track backup job success and failure automatically. ShadowProtect ImageManager Enterprise provides the following benefits:

- Rapid recovery in minutes with HeadStart Restore.
- Automatic consolidation of backup image files to streamline backup management and reduce disk space.
- Verification and re-verification of backup images.
- Replication of backup images to off-site locations.
- Automatic e-mail notification of backup job status.

ShadowProtect ImageManager Enterprise Features

HeadStart Restore (HSR) - In the event of system failure, simply finalize the recovery, prepare your virtual environment, run Hardware Independent Restore and reboot the system to a .VHD or .VMDK for rapid system recovery.

Replication - Duplicate your point-in-time backup images to a local drive, network drive or to an off-site location. Save your backup images locally for rapid disaster recovery. Replicate backup image files to an off-site location for archival purposes or in the event of a catastrophe.

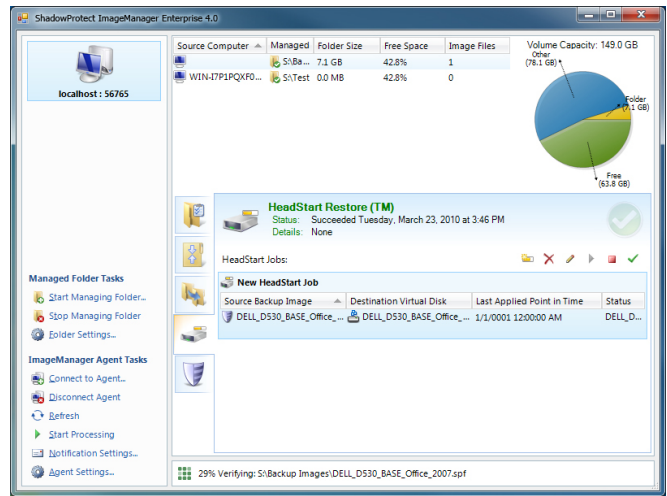

Consolidation - Automatically consolidate backup image files with ShadowProtect ImageManager Enterprise. This minimizes backup storage consumption and streamlines backup image management by providing consolidated daily, weekly and monthly backups.

Verification - ShadowProtect ImageManager Enterprise also verifies and re-verifies backup image chains to ensure that your backup images are in a known good state for fast and reliable recovery should a disaster occur.

Notification - Track the status of backup jobs through the notification tools in ShadowProtect ImageManager Enterprise. This feature allows you to set e-mail configurations so you can be notified of backup job success and failure automatically.

Save Time

Minimize the time required to restore your systems and data. Restore an entire system with HeadStart Restore quickly and easily – even if you're restoring terabytes of data.

Save Money

Get business back up and running in a matter of minutes, rather than hours. Every minute lost in recovery is income and productivity lost. Minimize recovery time windows and you maximize profits.

Save Storage Space

ShadowProtect ImageManager Enterprise allows you to consolidate your backup images to simplify management and minimize the amount of disk space required for system backups.
